EDUCATION

From Los Angeles, CA

University of California, San Diego

Master of Science - Data Science (M.S.D.S.)

B.S. Business Economics, Minor: Data Science, Cognitive Science
(with specialization in machine learning)

Expected Graduation: January 2028

Expected Graduation: June 2026

PROFESSIONAL EXPERIENCE

Semantic Visions Inc.

AI Developer

Prague, Czech Republic

June 2025-August 2025

- Built and deployed machine learning models to process and analyze large-scale unstructured text datasets (millions of global news articles).
- Developed data pipelines and model workflows in Python to extract entities, trends, and sentiment for business intelligence applications.

Origin Management

Business Management Trainee

Woodland Hills, California

June 2024 - July 2024

- Supported sales and marketing operations by implementing customer acquisition strategies and optimizing outreach processes.
- Analyzed performance metrics to improve conversion rates and streamline daily operations.

Account Manager

July 2024 - September 2024

- Led and built a dedicated sales team focused on teaching sales techniques and managing overall team success.
- Leveraged leadership and management expertise to ensure the team's readiness and performance in a fast-paced sales environment.

Encrypted LLC

Creator/Founder

Thousand Oaks, California

March 2021-Present

- Founded and designed a novel concept for a physical cryptocurrency exchange using gift card infrastructure to simplify digital asset access.
- Although still in design phase, developed early-stage product architecture and technical roadmap, integrating blockchain concepts with consumer-facing systems.

Boussina Lab

AI Research Modeling Head

La Jolla, California

September 2025 - Current

- Developed an AI-based model using UC Health patient dataset using OMOP to distinguish cytokine release syndrome (CRS) from sepsis in CAR-T therapy patients.
- Built scalable data pipelines using Big Query SQL and Python for cohort selection, feature engineering, and model training.
- Applied machine learning and statistical analysis to identify biomarkers and temporal patterns predictive of immune-related toxicity versus infection to create a final score of how likely the patient is septic versus having CRS.

Coursework/Skills

- Technical Skills: Java, Swift, Python (Programming), ML and AI modeling, eCommerce, Finance (Options/Stock Trading), Project Management, Data Management, & Data Analysis/Machine Learning
- Relevant Coursework: DSC 120 - Signal Processing of Data, DSC 80 - Data Science in Practice, DSC 30 - Data Structures & Algorithms, COGS 189 - Brain-Computer Interfaces, MGT 173 - Healthcare / Project Management, MGT 71 - Business Operations, DSC 106 - Data Visualization (Received Project Award given to top 4% of Students)

LICENSES AND CERTIFICATIONS (See LinkedIn)

- Finance & Quantitative Modeling for Analysts (Specialization) at Wharton (July 2022)**
 - Completed a six-course specialization covering building and interpreting comprehensive financial models and applying quantitative methods to support data-driven business decisions.
- Innovating in Healthcare - Harvard Online (Aug 2023)**
 - Explored innovative emerging technologies transforming healthcare delivery and patient outcomes.
- Specialization in Entrepreneurship: Developing the Opportunity - Wharton Online (June 2023)**
 - Identifying and evaluating new business opportunities and navigating early-stage development.
- Empathy and Emotional Intelligence at Work - University of California, Berkeley (Sep 2023)**
