EDUCATION — From Los Angeles, CA

University of California, San Diego

Master of Science - Data Science (M.S.D.S.) — Expected Graduation: January 2028

B.S. Business Economics, Minor: Data Science, Cognitive Science (with specialization in machine learning) — Expected Graduation: June 2026

PROFESSIONAL EXPERIENCE

Boussina Lab – Cancer Prediction Lab — La Jolla, California

AI Research Modeling Head — *September 2025 – Current*

- Developed an AI-based model using UC Health patient dataset using OMOP to distinguish cytokine release syndrome (CRS) from sepsis in post CAR-T therapy patients and presented this model to the American College of Physicians at the Sharp Medical Center for Innovation and Education, winning 1st place in the entire competition!
- Built scalable data pipelines using Big Query SQL and Python, ran feature engineering, and model training to show how predictive modeling can be applied in medicine.
- Applied machine learning and statistical analysis to identify biomarkers and temporal patterns predictive of immune-related toxicity versus infection to create a final score of how likely the patient is septic versus having CRS.

Semantic Visions Inc. — Prague, Czech Republic

AI Developer — June 2025-August 2025

- Built and deployed machine learning models to process and analyze large-scale unstructured text datasets (millions of global news articles).
- Developed data pipelines and model workflows in Python to extract entities, trends, and sentiment for business intelligence applications.

Origin Management — Woodland Hills, California

Business Management Trainee — June 2024 - July 2024

- Supported sales and marketing operations by implementing customer acquisition strategies and optimizing outreach processes.
- Analyzed performance metrics to improve conversion rates and streamline daily operations.

Account Manager — July 2024 - September 2024

- Led and built a dedicated sales team focused on teaching sales techniques and managing overall team success.
- Leveraged leadership and management expertise to ensure the team's readiness and performance in a fast-paced sales environment.

Projects

- Therapy Bot – Built a smartphone app with multiple AI therapist personalities that adapts to each user through daily mood ratings.
- Navy Atmosphere Radar Forecaster (i4NS) – In the Innovating for National Security Program at UCSD, built an AI model that predicts atmospheric ducting from NOAA data and lets a Navy ship retrain it on its own data.

Coursework/Skills

- Technical Skills: Java, Swift, Python (Programming), ML and AI modeling, eCommerce, Finance (Options/Stock Trading), Project Management, Data Management, & Data Analysis/Machine Learning
- Relevant Coursework: DSC 120 – Signal Processing of Data, DSC 80 – Data Science in Practice, DSC 30 – Data Structures & Algorithms, COGS 189 – Brain-Computer Interfaces, MGT 173 – Healthcare / Project Management, MGT 71 - Business Operations, DSC 106 – Data Visualization (Received Project Award given to top 4% of Students)
- Hobbies: Music Producer/DJ, Ice Hockey Player, and Eagle Scout.

LICSENSES AND CERTIFICATIONS (See LinkedIn)

- **Finance & Quantitative Modeling for Analysts (Specialization) at Wharton (July 2022)**
  - Completed a six-course specialization covering building and interpreting comprehensive financial models and applying quantitative methods to support data-driven business decisions.
- **Specialization in Entrepreneurship: Developing the Opportunity – Wharton Online (June 2023)**
  - Identifying and evaluating new business opportunities and navigating early-stage development.
- **Empathy and Emotional Intelligence at Work – University of California, Berkeley (Sep 2023)**
- **Innovating in Healthcare – Harvard Online (Aug 2023)**
